Line #	Timecode	Quote
1	[0:00:20]	KEVIN CORRIGAN: Good afternoon. Thank you everyone. Well,
2		we're going to shift gears a little bit and talk a little bit about Brazil.
3		You've heard about it tangentially earlier today. You've seen we've
4		been increasing our footprint there quite dramatically in the last,
5		certainly in the last year. Just a little history, about three years ago
6		we decided to focus more on Brazil. Why Brazil?
7	[0:00:40]	Well, it's the fifth largest country in the world, bigger than the
8		continental United States, large population, large natural resource
9		base, huge investment needs. I was thinking of that map that Kurt
10		showed earlier, that showed the gas pipeline network in the United
11		States.
12	[0:01:00]	And, if you look at the Brazilian equivalent, you'll see the pipeline
13		that Andrew showed and a couple of little lines up in the northeast.
14		So, if Brazil were to even do 25% of what the U.S. has done, it
15		would be billions of dollars' worth of investments.
16	[0:01:20]	I've been with EIG about eight-and-a-half years now. Prior to that I
17		worked at the InterAmerican Development Bank for 10 years, and
18		I've lived in Brazil now for about 14 years, on and off, beginning
19		when I was a teenager. My father was sent there as American
20		Council General in the 70s, so I'm a foreign service brat.
21	[0:01:40]	I later worked there with Manufacturers Hanover Trust Company,
22		for over 10 years, and then Chemical Bank. So, I feel very
23		comfortable with Brazil. I have three children born there who have
24		citizenship, and I am very happy today to introduce two very
25		esteemed colleagues who've come from Petrobras, but now run two
26		companies that we've invested in.
27	[00:02:00]	In the case, to my far right, is Rogério Mattos, who studied and got
28		a bachelor's in chemical engineering from the Federal University of
29		Rio de Janeiro.
30	[0:02:20]	He also has a bachelor's in economics from the State University of
31		Rio de Janeiro, and entered Petrobras in 1070 where he's had a very
32		illustrious career. Most recently, before becoming CEO of TBG, the
33		company that Andrew presented, he was head of M&A at Petrobras,

34		very involved in a lot of the acquisitions they made overseas, which,
35		in fact, now they're, in many cases, in the process of divesting.
36	[0:02:40]	But, Rogério has been very involved with that, so we're very happy
37		to have him here today. To my immediate right is João Ferraz, who
38		also went to the Federal University of Rio de Janeiro, where he
39		studied mechanical engineering.
40	[0:03:00]	So, I would wager these are two gentlemen who could go toe-to-toe
41		with Kurt and understand the presentation that he gave earlier today,
42		which probably very few of us could. But, they can do that later
43		over cocktails.
44	[00:03:09]	MR. JOÃO FERRAZ: At least we pretend to.
45	[00:03:10]	MR. CORRIGAN: Or pretend to.
46	[00:03:10]	MR. FERRAZ: Yeah, pretend to.
47	[00:03:11]	MR. CORRIGAN: So, João spent most of his career, or at least the
48		initial 20 years or so in very technical and engineering areas, and
49		then around 2000, switched over to the finance area, and eventually
50		was put in charge of an effort to help develop the company that he is
51		today CEO off, Sete Brazil.
51 52	[00:03:31]	today CEO off, Sete Brazil. So, he left Petrobras in 2011 to take over that position, where he's
	[00:03:31]	·
52	[00:03:31]	So, he left Petrobras in 2011 to take over that position, where he's
52 53	[00:03:31] [00:03:51]	So, he left Petrobras in 2011 to take over that position, where he's now been for the past couple of years. Just a quick aside, I met João

So, I wrote a little email, and then expected silence, and about a day later, João said, happy to meet you. Come Tuesday at 2:00. I said, oh, great. Thank you very much, and I was with Clay Taylor, and he and I went and had a nice visit. Then, much later, now that I've

50		
68		Petrobras way. I said why'd you do that. He goes, well, you wrote it
69		in Portuguese, and I've never gotten an email from a gringo in
70		Portuguese. So, that's a little aside.
71	[00:04:51]	So, I think we're very proud of the footprint we're building in Brazil.
72		And, as you've sensed earlier, I think we expect that involvement to
73		grow. It's a country with many, many opportunities, many needs,
74		and we'd like to be part of that.
75	[00:05:11]	So, I think let's take advantage of our two esteemed guests and talk
76		a little bit about the oil and gas industry, the infrastructure, needs,
77		and just generally about Petrogas. I'm going to try to avoid politics.
78		It'll be pretty hard to outshine our earlier speaker in that area, so
79		probably keep it more to the oil and gas area.
80	[00:05:31]	So, I'm going to start with Rogério, and perhaps you could talk a
81		little bit about the gas market in Brazil. It's a market where gas is
82		primarily used to generate electricity, so it hasn't really reached the
83		consumer. It's not used very much in households, but I think there's
84		a lot of opportunity there.
85	[00:05:51]	Maybe talk about how you see the gas market developing and
86		growing over the coming years. Then, perhaps talk a little bit about
87		TBG and how it might hope to participate in that growth in the
88		future. So, just give us a little overview, and then we can move from
89		there.
90	[00:06:05]	MR. ROGÉRIO MATTOS: Thank you. I'm glad to be here, to talk
91		with you. So, the gas market in Brazil is almost 3.4 billion of cubic
92		meters per day, 1.4 in the supply side comes from internal
93		production.
94	[00:06:25]	1 billion of cubic feet comes from the pipeline that Andrew just has
95		shown in his presentation. And, 0.9 comes from expensive LPG that
96		we need to import to comply with
97	[00:06:45]	In the demand side, we have 1.4 billion cubic feet for just
98	[00.001.0]	thermoelectrical, around 1.4 for other use, and 0.4-0.5 that Petrobras
99		uses in its refineries and fertilizer plants.
100	[00:07:05]	Until 2020, Petrobras plans to keep the amount of gas that comes
101	[00.07.05]	from Bolivia. That's one billion cubic feet, to renew the contract.
101		nom bonyia. That's one official cubic feet, to fellew the collifact.

102		But, it plans to double the internal production of gas and also double
103		the internal imports of LPG.
104	[00:07:25]	So, the idea is that there's a lot of room for new infrastructure,
105		pipelines, thermoelectrical plants, and this will be a necessity for
106		Brazil to increase its GDP.
107	[00:07:45]	But, there is another thing that can change this game. Brazil has a
108		resource in conventional gas, like 226 TCF.
109	[00:08:05]	And the government will do an auction in November in order to
110		offer 240 blocks. So, fortunately, we can develop, transform these
111		resources in gas.
112	[00:08:25]	So we get more and more opportunities using our expertise of TBG,
113		a very reliable company, and supported by I think two important
114		partners, Petrobras and EIG.
115	[00:08:45]	So, the idea, there is another thing that I think is good to comment
116		with you, is that two characteristics of Brazil market, gas market.
117		One is that all the gas, most all the gas, is associated gas. It's related
118		with the production of oil. So, we don't have unassociated gas.
119	[00:09:05]	So, this auction that will be carried on in November can bring, like
120		Kurt said this morning, he will not tell about C1, C2, C3, but just to
121		say that we can have a way to dry gas. We don't know yet.
122	[00:09:25]	So, I think the opportunities are good. The second is related with the
123		hydraulics. Brazil has long been dependent on hydropower.
124	[00:09:45]	And GDP growth, and also the dry season led us to invest a lot in -
125		So, I think this is the main opportunity in the demand side that
126		will push the offer of gas, and also the infrastructure. That's it.
127	[00:10:01]	MR. CORRIGAN: Thank you, Rogério. Well, let's shift gears a
128		little bit and move over to João. Let's talk a little bit about pre-salt.
129		We've heard about it tangentially today. It's obviously the largest oil
130		play in the world today, probably.
131	[00:10:21]	Maybe you can give us a little overview of the drilling market,
132		which is obviously the area that Sete Brazil is going to play a big
133		role in.
134	[00:10:41]	And, I guess, another thing that I think people would be interested
135	-	in is understanding how Brazil has gone from a model that relied

136		very heavily on overseas production of a lot of this infrastructure to
137		the creation of Sete Brazil, and now the creating industry that's
137		
		going to rely on domestic production, which I know you see as a big
139	500 10 513	opportunity for Sete in particular and Brazil in general.
140	[00:10:51]	MR. FERRAZ: Okay, Kevin. Well, first of all, I'd like to thank you
141		for your invitation, yours and Blair's, and I'm very happy to be here.
142		I hope I can fulfil the points that you have raised to me.
143	[00:11:11]	Let me start talking about Sete Brazil creation, the rationale for Sete
144		Brazil creation. Everything started in 2006, when Petrobras
145		discovered pre-salt. Pre-salt is a huge area, as has been told here. It's
146		one of the biggest oil fields discovered in the world in the last 30
147		years.
148	[00:11:31]	It's an area, the total area of pre-salt, is approximately 140,000
149		square kilometers, more or less, 58,000 square miles. While I didn't
150		know or have any clue about how big was 58,000 square miles.
151	[00:11:51]	Then a few years ago, I Googled it, just to compare. It's bigger than
152		England. So, it's a huge area, really huge area, full of oil. So far, all
153		wells that have been drilled in pre-salt have been commercially
154		attractive.
155	[00:12:11]	So, then, in 2008, back in 2008, when Petrobras started to size the
156		demands of goods and services to be applied for pre-salt, for the
157		pre-salt development, Petrobras came to the conclusion that the very
158		first step, the very first need for this development was drilling rigs,
159		but not regular drilling rigs.
160	[00:12:31]	Because of the water depth, we're talking here about 3,000 meters of
161	[00.12.51]	water depth, plus 7,000 meters of well length, so it's a total of 10
162		kilometers of total well.
163	[00:12:51]	We needed, Petrobras needed special rigs, state-of-the-art rigs, rigs
164	[00.12.31]	that were not fully available at that time in 2008, so that the rigs that
		·
165		Petrobras needed to be used in pre-salt needed to be constructed. So,
166	F00.12.113	all of them should be new builds.
167	[00:13:11]	Usually, the industry builds these rigs in Korea, China, Japan,
168		Singapore. But, on the other hand, Petrobras had a constraint, it still
169		has, because of the regulation in Brazil, any oil companies that want

170		to explore the oil in Brazil, they need to comply with local content
171		regulation.
172	[00:13:31]	So, we realized—at that time, I was at Petrobras, so that's why I saw
173	[00.13.31]	we—we realized at that time that this could be a very good
174		opportunity for us. We could, because of the fact that we needed a
175		huge number of new rigs to be constructed, on the other hand, we
176		needed to fulfil the local content demand.
177	[00:13:51]	We understood, that for the first time, we could have the benefit of
178	[00.13.31]	scale. It's scale that could attract investors, that could attract
179		international players, that could attract even international reliable
180		shipyards that were used to that type of construction to come in to
181		Brazil to establish in the country and to start to construct these rigs
182		in Brazil.
183	[00:14:11]	
	[00:14:11]	We tried, of course, on the other hand, drilling rigs are not assets
184		that usually oil companies have in their balance sheet. So, usually,
185		drilling rigs, they belong to drillers, and drillers are special
186	100 14 211	contractors, contracted by these oil companies.
187	[00:14:31]	So, Petrobras went to this market offering them the possibility of
188		long-term contracts, if they decided to construct these rigs in Brazil.
189		They were quite excited, especially the smaller ones. They were
190		quite excited about the contract.
191	[00:14:51]	But, on the other hand, they didn't have balance sheets, they didn't
192		have strength, economic strength, financial strength, they didn't
193		have the capability to raise capital, raise financing. So, we came to
194		the conclusion there was missing a small piece in this puzzle, and
195		this piece was a company that could consolidate without de-locating
196		the existing players.
197	[00:15:11]	So, we decided to create a company, that was Sete Brazil, not to
198		replace drillers, but to joint venture with them, so our business
199		model is, as a matter of fact, to establish joint ventures with existing
200		players, existing drillers.
201	[00:15:31]	So that we offer a strong balance sheet, a strong capacity for raising
202		finance, raising equity, offering guarantees, and what they add to
203		this joint venture is their capability to operate the drilling rigs.

204	[00:15:51]	So, with this model, we got by-we want two-bead process,
205		performed by Petrobras, one in 2011, the other one 2012, so totaling
206		28 long-term contracts. Long-term, I mean really long terms, 14.5
207		years in average, with a very good daily rate payback.
208	[00:16:11]	So that we have, today, expectancies for a revenue backlog of
209		almost \$90 billion on the next 20 years. So, with that, we
210		established this program together with the drillers.
211	[00:16:31]	We have seven drillers associated with us in these 28 rigs that we
212		are constructing. And, of course, we don't have to construct the rigs
213		in Brazil. What we have to do is to deliver local content. It seems a
214		little bit tricky, but
215	[00:16:51]	By delivering, for instance, the first rigs, our obligation is to deliver
216		55% of local content. We don't need to construct the rigs in Brazil,
217		so that we still have time to accommodate the construction of these
218		new shipyards in Brazil with the construction of the rigs abroad.
219	[00:17:11]	So, we are doing a kind of mixed construction when we associate
220		firstly the construction of the rigs, the hose, the blocks, the whole
221		blocks, abroad in the international shipyards, the international
222		shipyards that are constructing their own shipyards in Brazil.
223	[00:17:31]	Afterwards, for the last rigs that will be delivered, we have to
224		increase a little bit this local content, and for the last ones, the last of
225		this 28-rig program, we have to construct the full, whole, in Brazil.
226	[00:17:51]	But, this gives us a lot of time, in terms of accelerating the learning
227		curve, accelerating the transfer to technology from the international
228		shipyards for their branches in Brazil. So, all these five yards that
229		we have contracted that are under construction or are existing
230		shipyards in Brazil, they have association with international
231		shipyards.
232	[00:18:11]	Reliable shipyards that have all the capabilities to construct the rigs.
233		And, has been previously shown here, the program is performing
234		very well. We are ahead of schedule. As a matter of fact, we are a
235		little bit ahead of schedule. From the five yards, we have one below
236		the schedule and four ahead of the schedule.
237	[00:18:31]	So, I think one of the benefits that we have for our investors and for

238		our lenders is the fact that they are not investing one single rig
239		alone, one single operator alone. They are investing in a portfolio.
240	[00:18:51]	It's expected, in this business that 1, 2, 3 rigs, 1,2, 3 operators, 1, 2,
241		3 points may have some problems during the time, but we are
242		benefiting from a portfolio. The proof of that is the fact that from
243		the five yards we have one behind schedule, four ahead of the
244		schedule, so that the average construction schedule is ahead of
245		schedule.
246	[00:19:10]	MR. CORRIGAN: Great. Thank you. João has addressed, and I
247		think he's made a case that oftentimes overseas observers think that
248		Brazil is sort of embarking on a difficult course, they're going to be
249		delays, they're not going to have the technical capabilities. I think
250		what João has said is they've done it smartly.
251	[00:19:30]	They've teamed up with overseas constructors and operators, and
252		expect a good outcome. So far, from our perspective, we've
253		certainly seen Sete Brazil developing as planned. So, we have no
254		concerns, and we think you guys are all doing a great job.
255	[00:19:47]	MR. FERRAZ: Sorry, Kevin, performing ahead of planned, not as
256		planned.
257	[00:19:50]	MR. CORRIGAN: Ahead of plan. Okay. Good man. Sorry. I'll pay
258		for that one later.
259	[00:19:57]	MR. FERRAZ: Yeah. So far.
260	[00:20:01]	MR. CORRIGAN: Rogério, I want to come back to you a little bit
261		and just talk about ANP is the Brazilian hydrocarbons regulator, and
262		they're the ones that issue bidding rounds and whatnot. We've got a
263		couple coming up later this year.
264	[00:20:21]	I just wondered if you could talk a little about how do you see—
265		what do you see coming in the next, for the remainder of this year?
266		And, how do you see Brazil, the onshore versus offshore, and the
267		gas development? Is there going to be more and more onshore
268		development? And, who do you see as the main players?
269	[00:20:34]	MR. MATTOS: Okay. In Brazil, we have, up till now, one regime
270		that is concession for all areas, including the previous pre-salt area.
271		From now on, there'll be a difference.

272	[00:20:54]	All areas, except pre-salt, will be concession, and pre-salt will be
273		producing sharing agreement. The government thinks that, or
274		thought that, a concession is good, after many debates, of course,
275		that concession is more applicable to when the exponential risk is
276		high.
277	[00:21:14]	But, for results like Ferraz just mentioned, the exponential risk is
278		low. So, they preferred the producing sharing agreement.
279	[00:21:34]	Now, here in the next month, we are having an auction for a huge
280		block, huge area in pre-salt that we call Libra. Libra has something
281		around eight and twelve billion barrels. It's a huge investment.
282	[00:21:54]	I think that it will be probably, if Ferraz can help me, 27 or 28
283		drilling rig facilities to go.
284	[00:22:03]	MR. FERRAZ: Could be.
285	[00:22:04]	MR. MATTOS: Could be. And, it's difficult. The difficulty is not on
286		the exploration of oil, because the Brazil government things that the
287		oil is there. It's just to put the oil in production, because it's too deep
288		and far from the coast.
289	[00:22:24]	180 miles, so, it's far from it. So, I think that there are 10 companies
290		that make the application for these new auctions, in October.
291	[00:22:44]	And like I said before, there will be an auction for this onshore
292		unconventional area, 240 blocks, on next November. Just that.
293	[00:22:52]	MR. CORRIGAN: Well, before we wind down and open it up to
294		questions, I just would like each of you to recommend what—if you
295		were us, you've gotten to know us now as investors in each of your
296		companies, what would you recommend we focus on?
297	[00:23:12]	How would you see us increasing our footprint in Brazil in the
298		coming couple of years?
299	[00:23:14]	MR. FERRAZ: I would say definitely infrastructure. I'd say that the
300		biggest demand in the country, especially in the oil business, but in
301		other sectors as well, will be infrastructure that is very poor in the
302		country, and definitely is a bottleneck for the development in
303		general.
304	[00:23:34]	And, I think that this could be a very good opportunity for
305		investments there.

306	[00:23:40]	MR. MATTOS: I agree with Ferraz. If you think that we are going
307		to double oil production from 2—Brazil is 2.1, total petrol price 2.5.
308		He will double the amount of oil that mostly will come from pre-
309		salt.
310	[00:24:00]	And the logistics will play a good game on this So, offshore
311		logistics also will be a good opportunity, and onshore logistics to
312		let's say transport the gas through many other parts of the country.
313	[00:24:20]	Although our pipeline, the TBG pipeline, it concentrates, the area is
314		an amount, let's say, two-thirds of GDP of Brazil is around our
315		pipeline. So, they will increase a lot. So, we need to expand the
316		pipeline and build another one.
317	[00:24:35]	MR. FERRAZ: As Rogério said, pre-salt, in average, is located, the
318		main unit will be located between 150-180 miles from shore. So, the
319		models that have been developed so far for offshore oil
320		development are not feasible for pre-salt.
321	[00:24:55]	So, new models must be conceived, must be put in operation,
322		demanding new types of assets.
323	[00:25:15]	So, existing assets, existing logistics, may not be feasible to be
324		applied in the pre-salt development. That, as I said, is huge, and
325		everything can be justified there, because of the huge amount of oil
326		and the scale. The scale there is really huge.
327	[00:25:35]	So, new things, new developments that must be put in place can be
328		easily, or less difficultly, feasible because of the scale, the demand
329		that will be there.
330	[00:25:40]	MR. CORRIGAN: Great. Well, thank you, gentlemen. We
331		appreciate it. I would like to open it up to questions, and even
332		though I said I wasn't going to touch on politics, any subject is fair
333		game. They may not know the answer, or they might tell you what
334		they think.
335	[00:26:00]	But please—I'm having a hard time seeing. Don't everybody shoot
336		up their hands at the same time. I think I see a question in the back
337		there.
338	[00:26:17]	PARTICIPANT: Your eyesight's not too good, Kevin. I'm up here.
339	[00:26:19]	MR. CORRIGAN: Well, there are arms going up. I'm not supposed

340		to call on the big boss right off the bat.
341	[00:26:23]	PARTICIPANT: While you're thinking that, two questions. Is Rio
342		going to be ready for the World Cup? And, the second question, you
343		can split them up however you'd like, is the current dust-up over our
344		habit of spying on world leaders, including President of Brazil.
345	[00:26:43]	She recently canceled the state visit scheduled for next month in the
346		United States, is that a real issue, or is that more local politics?
347	[00:26:55]	MR. MATTOS: I think it's more problem for internal. It's more
348		internal. I don't know understand why they have to spy on Brazil.
349	[00:27:07]	PARTICIPANT: They spy on everybody.
350	[00:27:10]	MR. MATTOS: I don't understand why they are doing that. We
351		work with so many American companies, probably they know all
352		the data. It does not make any sense for me.
353	[00:27:30]	But, I think, in this present, I have to show to the other people that
354		are not very linked to politics and economic data, that this is
355		something that hurt the sovereign of Brazil. I think it's for I don't
356		know if Ferraz wants to compliment?
357	[00:27:40]	MD EEDDA7. Lagrag with you Dogário Lthink you are probably
337	[00.27.40]	MR. FERRAZ: I agree with you, Rogério. I think you are probably
358	[00.27.40]	following up what's going on in the country, and recently, in July,
	[00.27.40]	
358	[00.27.40]	following up what's going on in the country, and recently, in July,
358 359	[00:28:00]	following up what's going on in the country, and recently, in July, there was some demonstrations, strong demonstrations there,
358 359 360		following up what's going on in the country, and recently, in July, there was some demonstrations, strong demonstrations there, especially from the young people.
358 359 360 361		following up what's going on in the country, and recently, in July, there was some demonstrations, strong demonstrations there, especially from the young people. All the politics, they became very uneasy. So, I think eventually the

All the politics, they became very uneasy. So, I think eventually the U.S. government really gave a very good reason for the politics
358 359 360 361 362 363		following up what's going on in the country, and recently, in July, there was some demonstrations, strong demonstrations there, especially from the young people. All the politics, they became very uneasy. So, I think eventually the U.S. government really gave a very good reason for the politics there in the country to find a way out and to focus on another
358 359 360 361 362 363 364	[00:28:00]	following up what's going on in the country, and recently, in July, there was some demonstrations, strong demonstrations there, especially from the young people. All the politics, they became very uneasy. So, I think eventually the U.S. government really gave a very good reason for the politics there in the country to find a way out and to focus on another subject.
358 359 360 361 362 363 364 365	[00:28:00]	following up what's going on in the country, and recently, in July, there was some demonstrations, strong demonstrations there, especially from the young people. All the politics, they became very uneasy. So, I think eventually the U.S. government really gave a very good reason for the politics there in the country to find a way out and to focus on another subject. I don't think this is really something that is important, is taken
358 359 360 361 362 363 364 365 366	[00:28:00]	following up what's going on in the country, and recently, in July, there was some demonstrations, strong demonstrations there, especially from the young people. All the politics, they became very uneasy. So, I think eventually the U.S. government really gave a very good reason for the politics there in the country to find a way out and to focus on another subject. I don't think this is really something that is important, is taken seriously there. But, the other question I think is more important. I
358 359 360 361 362 363 364 365 366 367	[00:28:00]	following up what's going on in the country, and recently, in July, there was some demonstrations, strong demonstrations there, especially from the young people. All the politics, they became very uneasy. So, I think eventually the U.S. government really gave a very good reason for the politics there in the country to find a way out and to focus on another subject. I don't think this is really something that is important, is taken seriously there. But, the other question I think is more important. I think, and I hope, the World Cup will be there, because I have
358 359 360 361 362 363 364 365 366 367 368	[00:28:00]	following up what's going on in the country, and recently, in July, there was some demonstrations, strong demonstrations there, especially from the young people. All the politics, they became very uneasy. So, I think eventually the U.S. government really gave a very good reason for the politics there in the country to find a way out and to focus on another subject. I don't think this is really something that is important, is taken seriously there. But, the other question I think is more important. I think, and I hope, the World Cup will be there, because I have bought already booths for, and Blair, you are already invited for
358 359 360 361 362 363 364 365 366 367 368 369	[00:28:00]	following up what's going on in the country, and recently, in July, there was some demonstrations, strong demonstrations there, especially from the young people. All the politics, they became very uneasy. So, I think eventually the U.S. government really gave a very good reason for the politics there in the country to find a way out and to focus on another subject. I don't think this is really something that is important, is taken seriously there. But, the other question I think is more important. I think, and I hope, the World Cup will be there, because I have bought already booths for, and Blair, you are already invited for our games.
358 359 360 361 362 363 364 365 366 367 368 369 370	[00:28:00] [00:28:20]	following up what's going on in the country, and recently, in July, there was some demonstrations, strong demonstrations there, especially from the young people. All the politics, they became very uneasy. So, I think eventually the U.S. government really gave a very good reason for the politics there in the country to find a way out and to focus on another subject. I don't think this is really something that is important, is taken seriously there. But, the other question I think is more important. I think, and I hope, the World Cup will be there, because I have bought already booths for, and Blair, you are already invited for our games. BLAIR: You didn't have to tell everybody.

374		there. Obviously, a different situation, but a lot of anticipation of a
375		boom in investment there.
376	[00:29:12]	Are there lessons that you see, looking back now on the since '06
377		period in Brazil, that an investor might take from that experience,
378		and then turn and apply to Mexico situation, on the cusp of its own
379		boom, either dos or don'ts from that experience?
380	[00:29:29]	MR. FERRAZ: It seems a kind of wave, right? It seems these
381		movements, they happen like waves. Some, the season today is
382		Mexico, yesterday was Brazil, and in years to come may be
383		Columbia, may be other places. So, I think there's a kind of wave
384		that comes and goes.
385	[00:29:49]	And I have seen, I'm there working in Brazil for long, and I've seen
386		this many, many times. I don't see this would be really a problem.
387		The fact is that, for instance in our case, Sete Brazil, we are
388		almost—we have a \$25 billion program of investment.
389	[00:30:09]	And we are fully funded in terms of 80% of our demands. So, what
390		is really missing is \$5 billion from a total of \$25 billion, and we are
391		not facing any problems to raise the funds.
392	[00:30:29]	So, as far as we have a good project, you have something to show
393		that we will generate a good return. I think there will be a good
394		investment and good places to raise the funds, whether it's in Brazil
395		or in Europe or in the U.S.
396	[00:30:49]	For instance, we have, as Blair said in the morning, there are some
397		rumors that we may be applying for bond issuance next month. It
398		could be. We are considering this possibility.
399	[00:31:09]	But, not as a demand, not as a need. Right? Taking that we have
400		already 80% of our total demand fully funded, we just need this \$5
401		billion—just \$5 billion, it's a lot of money, right? Well, compared to
402		the other \$25.
403	[00:31:29]	We have several sources of possibilities to raise these funds. One of
404		the sources that we are considering is the bond market here in the
405		U.S., maybe the bond market in Brazil as well. So, what you're
406		doing is a kind of management, in terms of all alternatives to raise
407		the best ones for ourselves.

408	[00:31:49]	So, we are not fully dependent on the bonds or some specific source
409	[00.01.15]	of funds. And, I believe that there are other projects, good projects,
410		in the country that are in a similar way.
411	[00:32:09]	So, of course, we, once more, like many other times, we lost a good
412	[00.02.05]	opportunity for accelerating the development of the country, so on
413		the last two or three years, I think we didn't really perform.
414	[00:32:29]	We didn't really do our homework, in terms of making use of the
415	[00102125]	very good opportunities that we have being created in the last 10-15
416		years. So, we have to re-take everything back. But, I think that the
417		projects are there, infrastructure projects, pre-salt projects, gas
418		projects, energy projects.
419	[00:32:49]	The world will be needing this energy, right? The country has
420	[00.025]	different sources of energy there. So, I think eventually we're going
421		to resolve these matters. I don't know if you
422	[00:33:05]	MR. MATTOS: No, it's okay.
423	[00:33:07]	MR. CORRIGAN: Are there any other questions? I have a quick
424	[00.00.0.]	one, since we've delved in to a new area. The PT is the worker's
425		party who's been in power now for 10 years, going on 12. We have
426		elections next year. Are they going to continue their—are they
427		going to stay in power, or are we going to have a change? What do
428		you think?
429	[00:33:26]	MR. MATTOS: We have four candidates up to now, main
430		candidates. The current president, Mrs. Dilma. Two gentlemen that
431		were governors of important states in Brazil.
432	[00:33:46]	And one lady that is more linked to environmental and social
433		demands. The support of this lady that I mentioned, although it's
434		good in the young people, but she didn't have enough, in my point
435		of view, enough support, political support around the country.
436	[00:34:06]	I think the broader support that Mrs. Dilma has is quite important.
437		But, I think they are—what I would like to address is the following:
438		There was no one who's radical, no one who they will keep in the
439		space, the economy.
440	[00:34:26]	Maybe they change the priorities, but the economy will go on in the
441		same way. But, who will win? I don't know.

442	[00:34:36]	MR. FERRAZ: I'm very—maybe I'm the wrong guy to answer this
443		question, Kevin, because I think I have never elected anyone. So,
444		every single person I vote for, they lose. So, I'm very—maybe I'm
445		not a very good person to answer this question.
446	[00:34:56]	MR. CORRIGAN: Was there another—here we go.
447	[00:35:00]	PARTICIPANT: For João Carlos, I was wondering if you could say
448		a few words about what investors should expect in terms of a
449		timeframe of the development of these pre-salt resources? I mean
450		are talking five years, 10 years, 25 years?
451	[00:35:20]	How long is it going to take to get these things ramped up to being a
452		meaningful part of the world oil supply?
453	[00:35:25]	MR. FERRAZ: Well, if you take the pre-salt as a whole, I think the
454		pre-salt is already generating revenues, right? If you take from the
455		discovery from 2006.
456	[00:35:45]	2008 the first unit was a temporary unit that was installed there to
457		produce oil in one well. Today, seven years later, we are producing
458		steadily, consistently over 350,000 barrels per day.
459	[00.26.05]	
439	[00:36:05]	So, it's already a province that is generating cash flow generation,
460	[00:36:05]	oil. Of course, lots of other things must be implemented there. But,
	[00:36:05]	
460	[00:36:05]	oil. Of course, lots of other things must be implemented there. But,
460 461	[00:36:05]	oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating
460 461 462		oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating value.
460 461 462 463		oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating value. In terms of our company, we are dedicated today, of course we have
460 461 462 463 464		oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating value. In terms of our company, we are dedicated today, of course we have plans to diversify investments in the drilling sector, but also in other
460 461 462 463 464 465		oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating value. In terms of our company, we are dedicated today, of course we have plans to diversify investments in the drilling sector, but also in other sectors. We understand that the model that you used for developing
460 461 462 463 464 465 466	[00:36:25]	oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating value. In terms of our company, we are dedicated today, of course we have plans to diversify investments in the drilling sector, but also in other sectors. We understand that the model that you used for developing the drilling rigs in Brazil could be replicated for other assets as well.
460 461 462 463 464 465 466 467	[00:36:25]	oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating value. In terms of our company, we are dedicated today, of course we have plans to diversify investments in the drilling sector, but also in other sectors. We understand that the model that you used for developing the drilling rigs in Brazil could be replicated for other assets as well. For instance, each rig, during the drilling process, demands between
460 461 462 463 464 465 466 467 468	[00:36:25]	oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating value. In terms of our company, we are dedicated today, of course we have plans to diversify investments in the drilling sector, but also in other sectors. We understand that the model that you used for developing the drilling rigs in Brazil could be replicated for other assets as well. For instance, each rig, during the drilling process, demands between 3-5 supply bolts per rig during the operation. So, knowing that we
460 461 462 463 464 465 466 467 468 469	[00:36:25]	oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating value. In terms of our company, we are dedicated today, of course we have plans to diversify investments in the drilling sector, but also in other sectors. We understand that the model that you used for developing the drilling rigs in Brazil could be replicated for other assets as well. For instance, each rig, during the drilling process, demands between 3-5 supply bolts per rig during the operation. So, knowing that we have under construction 29, so let's say 30 rigs, our demand for our
460 461 462 463 464 465 466 467 468 469 470	[00:36:25] [00:36:45]	oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating value. In terms of our company, we are dedicated today, of course we have plans to diversify investments in the drilling sector, but also in other sectors. We understand that the model that you used for developing the drilling rigs in Brazil could be replicated for other assets as well. For instance, each rig, during the drilling process, demands between 3-5 supply bolts per rig during the operation. So, knowing that we have under construction 29, so let's say 30 rigs, our demand for our own would be around between 120 to 150 supply bolts.
460 461 462 463 464 465 466 467 468 469 470 471	[00:36:25] [00:36:45]	oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating value. In terms of our company, we are dedicated today, of course we have plans to diversify investments in the drilling sector, but also in other sectors. We understand that the model that you used for developing the drilling rigs in Brazil could be replicated for other assets as well. For instance, each rig, during the drilling process, demands between 3-5 supply bolts per rig during the operation. So, knowing that we have under construction 29, so let's say 30 rigs, our demand for our own would be around between 120 to 150 supply bolts. The demand, the total demand, for supply bolts for pre-salt is over
460 461 462 463 464 465 466 467 468 469 470 471 472	[00:36:25] [00:36:45]	oil. Of course, lots of other things must be implemented there. But, in terms of pre-salt as a whole, I think pre-salt is already generating value. In terms of our company, we are dedicated today, of course we have plans to diversify investments in the drilling sector, but also in other sectors. We understand that the model that you used for developing the drilling rigs in Brazil could be replicated for other assets as well. For instance, each rig, during the drilling process, demands between 3-5 supply bolts per rig during the operation. So, knowing that we have under construction 29, so let's say 30 rigs, our demand for our own would be around between 120 to 150 supply bolts. The demand, the total demand, for supply bolts for pre-salt is over 500. So, also, with local content on board. So, the same story. But,

Case 1:18-cv-01047-PGG-RWL Document 151-81 Filed 09/12/23 Page 17 of 17

476		first rig, is already floating, has been constructed in Singapore.
477	[00:37:45]	So it will be brought to Brazil to be finalized and to be installed, the
478		other parts that will comply with the local content, as I mentioned
479		before. So, the second, we have under construction today eight rigs,
480		so eight rigs are already with still plates cut, welded, parts being
481		built, being erected.
482	[00:38:05]	So, we are in the pre-operation phase. Our operation phase will start
483		in 2015. By 2019, we will have 90% of our rigs already in
484		operation. By 2019, our EBIDA will be \$4.6 billion per year.
485	[00:38:25]	Dividends distribution from 2020 over \$2 billion for Sete Brazil for
486		you guys. Right? So, I think this is our plans.
487	[00:38:45]	They are very consistent, very aligned with the plan, so we are stuck
488		to the plan. We are performing as planned. And, I don't see any
489		reason why we should deviate from that. So, responding to your
490		questions, by 2020, pre-salt will be producing over one million
491		barrels a day.
492	[00:39:05]	So almost three times what they are producing today. And by 2020,
493		all our rigs will be in operation generating the cash flow that we are
494		expecting.
495	[00:39:19]	MR. CORRIGAN: Well, thank you very much, gentlemen. I think
496		we'll conclude with that, and I'd like you all to join me in thanking
497		our visitors from Brazil. Thank you very much.
